

Functional And Non-Functional Requirement

AIM:

To write the Functional & Non-functional requirement for our project.

FUNCTIONAL:

- system allows users to register and log in.
- Admin can create, update and manage courses and upload course materials such as videos, PDF and assignment.
- Students can view, access and downloaded course content through the dashboard.

NON-FUNCTIONAL:

- system should provide fast response.
- system should support multiple users at a time.
- user friendly, easy to understand and UI should be simple.

RESULT:

Hence, the requirements were written Successfully.

EPIC 1: User Management System

User Story:

- As a admin, I want to manage users so that I can control access.
- As a student, I want to securely log in so that I can access my courses.

Features:

- user login
- user registration
- password encryption
- Profile Management

EPIC 2: course content Management

User Story:

- As a admin, I want to upload and manage course materials so that students can learn easily.
- As a student, I want to view and download course content so that I can study easily.

Features:

- create and manage courses
- view/download materials
- upload videos, PDF & notes
- organize content
