

AIM:

To design and implement Agile sprint for developing a cloud-based course content Management system.

PROCEDURE:

1. Project Scope:

Identify Core functionalities such as user registration, course management, content upload, cloud storage and dashboard visualization.

2. Epic of User Stories:

create high-level epics such as User Management course Management and Progress Tracking. Define user stories based on system requirement and expected functionalities.

3. Plan the Sprints:

Divide the project into multiple sprints based on priority and dependency.

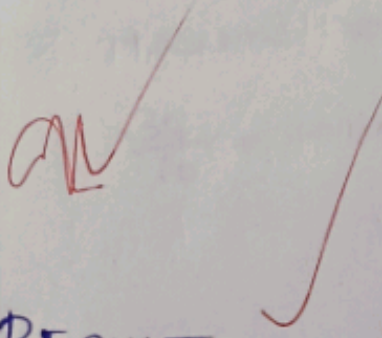

Allocate tasks for each sprints with clear deliverables and timelines.

4. Sprint Execution:

Develop backend services and database
Design and develop the web-based dashboard
for course access and management

5. Testing & Iteration:

Perform testing after each point.
Identify and fix bugs and improves system
performance.

RESULT:

Thus, Agile Sprint planning & execution
were completed successfully.

TO write the functional requirement for our project.

FUNCTIONAL

we will have a list of requirements

4	Design login UI	Pradheep V	To Do	Pradheep Azure			4/18/2025 2:14:57 AM
5	Develop dashboard	Pradheep V	To Do	Pradheep Azure			4/18/2025 2:14:36 AM
6	Upload course files	Pradheep V	To Do	Pradheep Azure			4/18/2025 2:14:21 AM
7	Deploy application	Pradheep V	To Do	Pradheep Azure			4/18/2025 2:14:07 AM
8	Store data in Azure	Pradheep V	To Do	Pradheep Azure			4/18/2025 2:13:50 AM

NON-FUNCTIONAL

System should support multiple users at a time
 System should be easy to understand and use
 System should be simple.

It is a functional requirement
